is of symc positive (wrist) -ist TVC ON) -in/Short to GND	1) Wrist video but not in sync with CCIV system 2) Video but no video control Worst Case: Lass of mission critical video.	The M7 RYS/RMS cable is a 20-inch long assembly, terminated on each end with a 37-pin connector is wires are shielded #24 Twimax twisted-pair wires commands from the RMS to the RMS wrist or elbow to the RMS. The cable design is taken from the successfully cable-connector assembly in which the wire terminal flexture at the joint between the wire and the concentration is moved away from the conductor of the length of the conductors encapsulated in a palso protects the assembly from dirt and entrappin space. The cable and its components meet the applicable specifications. These requirements include: • General/Hechanical/Electrical Features • Design and Construction • Materials • Terminal Solderability • Environmental • Qualification • Marking and Serialization • Marking and Serialization • Traceability and Documentation	flown Apollo program. The design is a inations are protected from excessive connector terminal. The load connection and distributed axially along potted-taper profile. This technique ped moisture which could cause problems

is af sync positive (wrist) ist TVC DW) in/Short to GND	1) Wrist video but not in sync with CCTV system 2) Video but no video control Worst Case: Loss of mission critical video.	Procurement Control - Wire, connectors, solder, etc. are procured from and suppliers which meet the requirements set forth in the CCTV control Plan Work Statement (WS-2593176). Incoming Inspection & Storage - Incoming Quality inspections are made materials and parts. Hasults are recorded by lot and retained in file control numbers for future reference and traceability. Accepted items Material Controlled Stores and retained under specified conditions untifabrication is required. Non-conforming materials are held for Material (MRB) disposition. (PAI-307, PAI IQC-53). Assembly & Test - Prior to the start of assembly, all items are verified again by the operator who assembles the kit by checking again as-built-parts-list (ABPL). Specific instructions are given in assembly drawing motes and applicate called out in the Fabrication Procedure and Record (FPR-2293290). The Process Standard crimping flight connector contacts, 2280801 - Process splicing of standard interconnecting wire using Raychen solder sleever process. Standard marking of parts or assemblies with epoxy colors, 22 material and test procedure (TP-AT-2293290). Quality and DCAS inspect at the completion of key operations. Preparation for Shipment - When fabrication and test is complete, the packaged according to 2280746, Process Standard for Packaging and Han All related documentation including assembly drawings, Parts List, AB is gathered and held in a documentation folder assigned specifically assembly. This folder is retained for reference.	inspections are made on all received than retained in file by drawing and ility. Accepted items are delivered to ecified conditions until cable is are held for Material Review Board. all (tems are verified to be correct ated to form a kit. The items are kit by checking against the ring notes and applicable documents and (FPR-2293290). These are 2280800 - acts, 2280801 - Process Standard in-line Raychem solder sleeves, 2280876 - with epoky colors, 2280876. Potting sality and DCAS inspections are performed test is complete, the cable assembly is for Packaging and Handling Guidelines. Assigned specifically to each cable.
